

VAZHI Frontend Build Specification

Your Role

Build the VAZHI citizen-facing transportation frontend from the supplied Stitch design ZIP.

Work in exactly three phases. Do not skip phases. Do not start the next phase until the current phase is complete, verified, and approved.

Use the Stitch ZIP as the visual reference, but follow this document when the ZIP contains contradictory data, missing responsive variants, or privacy issues.

Stitch Design Fidelity Requirement

The supplied Stitch ZIP is the primary visual and UX reference for this project.

Before implementing each route:

1. Inspect that screen's `code.html`.
2. Inspect that screen's `screen.png`.
3. Recreate the visual hierarchy, layout, spacing, typography, card structure, navigation placement, form composition, and interaction states as closely as possible.
4. Reuse shared components and design tokens so visual consistency remains intact across the application.
5. Compare the implemented screen against the Stitch screenshot at desktop and mobile breakpoints.

Do not redesign screens that already exist in the Stitch export.

Do not replace the visual language with a generic dashboard, generic booking site, Material UI, Bootstrap, or another component-library style.

Preserve:

- Civic-minimal visual style
- Warm cream light backgrounds

- Forest-green actions
- Sage-green subtle accents
- Dark charcoal and dark-slate theme surfaces
- Hanken Grotesk-style hierarchy
- JetBrains Mono transit metadata
- 4px spacing rhythm
- Desktop 12-column layout
- Mobile 4-column layout
- Top navigation on desktop
- Bottom navigation on mobile
- Sticky booking summaries on desktop
- Collapsible summaries and fixed CTA on mobile
- Map overlays, route cards, seat-grid composition, and ticket-style presentation

If the Stitch design conflicts with this specification, follow this specification for:

- Canonical journey data
- Approved color palette
- Passenger privacy
- PII handling
- Accessibility
- Responsive behavior
- Feature flow
- Service architecture

Known Stitch design corrections must be applied rather than copied:

- Use #4A7C59 as the primary accent.
- Use #FAFAF7 as the light background.
- Use the canonical Salem New Bus Stand → Chennai CMBT journey.
- Use SETC Ultra Deluxe, AC, 2+2, TN 01 AN 1234.
- Use 08:30 → 13:45, Platform 04, and ₹410 per passenger.
- Never expose another passenger's identity or gender.
- Passenger Details must generate one form for every selected seat.
- Live Tracking and Refund screens must use canonical data.
- Add missing mobile and dark-mode layouts in the same Stitch visual language.

The objective is:

“Implement the Stitch design with high visual fidelity, while correcting the documented data, privacy, accessibility, and responsive-design issues.”

1. Product

VAZHI is a citizen-focused Tamil Nadu transportation platform.

Primary user journey:

```text Home → Search Journey → Explore Buses → Select Seats → Passenger Details → Review Booking → Payment → Booking Confirmation → Digital Ticket → My Trips → Live Tracking / Refund / Preferences

Current product scope is frontend only.

Do not create:

- Backend services
- Database
- Authentication server
- Real payment gateway
- Government API integration
- TNSTC API integration
- Analytics
- Real notifications service

Use typed mock services as the future API boundary.

# 2. Required Technology

Use:

- Svelte 5
- SvelteKit
- TypeScript
- Tailwind CSS 4

- Paraglide i18n
- MapLibre GL
- Static adapter

Do not use:

- React
- Next.js
- Vue
- Another CSS framework
- Component libraries unless explicitly approved

## 3. Required Architecture

Preserve this structure:

```
src/
├── lib/
│ ├── components/
│ │ ├── primitives/
│ │ ├── shell/
│ │ ├── transit/
│ │ ├── booking/
│ │ └── journey/
│ ├── stores/
│ ├── services/
│ ├── mocks/
│ ├── types/
│ └── utils/
├── routes/
├── app.css
└── app.html
```

```
messages/
├── en.json
└── ta.json
```

```
static/
├─ fonts/
└─ geo/
```

Rules:

- Components must not contain direct mock fixtures.
- Pages must use typed service functions.
- Services must be ready to change from mock data to HTTP APIs later.
- Keep domain types centralized in `src/lib/types`.
- All user-facing text must use Paraglide messages.
- Do not hardcode user-facing English or Tamil text inside page components.

## 4. Design System

### Color Palette

Use these exact tokens:

| Role                 | Value   |
|----------------------|---------|
| Primary Accent       | #4A7C59 |
| Light Accent         | #86A789 |
| Light Background     | #FAFAF7 |
| Dark Container       | #141716 |
| Card / Surface Dark  | #1B1F1D |
| Primary Dark Text    | #1A1A1A |
| Secondary Dark Text  | #555555 |
| Primary Light Text   | #FFFFFF |
| Secondary Light Text | #9CA3AF |

Use:

- #4A7C59 for primary actions, active navigation, selected seats, confirmed state, and active route.
- #86A789 for subtle highlights, recommendations, borders, inactive route/progress lines, and comfort-map areas.
- #FAFAF7 for light-mode background.

- #141716 for dark-mode background.
- #1B1F1D for dark cards and panels.

Do not use #316342 as the primary accent.

## Typography

- Use Hanken Grotesk or another highly readable Tamil-compatible sans-serif for UI.
- Use JetBrains Mono for transit metadata only:
  - time
  - fare
  - PNR
  - platform
  - distance
  - vehicle number
  - ticket code

## Layout

Desktop:

12-column grid

24px gutters

Maximum content width: 1280px

Mobile:

4-column grid

16px margins

12px gutters

Rules:

- Minimum touch target: 44px × 44px
- Standard button radius: 8px
- Card radius: 16px
- Modal/bottom-sheet radius: 24px
- Avoid excessive shadows, gradients, glassmorphism, or decorative clutter.

- Use calm civic minimalism: clear hierarchy, generous whitespace, trusted transit information.

## 5. Canonical Journey Data

Use this exact data for every active booking-flow screen:

Route:

Salem New Bus Stand → Chennai CMBT

Bus:

SETC Ultra Deluxe

AC

2+2

TN 01 AN 1234

Departure:

08:30

Arrival:

13:45

Duration:

5h 15m

Distance:

350 km

Boarding:

Salem New Bus Stand

Platform 04

Fare per passenger:

Base: ₹380

Taxes: ₹30

Total: ₹410

Examples:

1 passenger = ₹410

2 passengers = ₹820

4 passengers = ₹1,640

Do not use contradictory values such as:

- Non-AC Sleeper
- 2+1 bus layout
- 22:30 departure
- 05:15 arrival
- TN 54 N 8872
- Express Line 42
- Central Station
- North Terminal
- US dollars

Historical trips may use different data only inside My Trips and must be clearly separate from the active canonical booking.

## 6. Critical Privacy Rules

Never expose another passenger's:

- Name
- Gender
- Age
- Seat identity
- Phone number
- Email
- Photo
- Profile
- Government ID
- Medical information

Do not use:

- Aadhaar collection
- Address collection
- Passenger phone collection
- Passenger email collection
- PII in URLs
- PII in localStorage
- PII in sessionStorage
- PII in cookies
- PII in mock fixtures
- PII in analytics
- PII in console logs
- {@html} for passenger input

Passenger details must be memory-only and must not be copied into the shared booking draft.

## Women-Friendly Seating

Use only this anonymous aggregate phrase:

Women passengers nearby

Show this disclaimer:

This is a preference indicator, not a guaranteed seating arrangement.  
Seating may change before departure.

Never identify who is seated in another seat.

## 7. Navigation

### Desktop

VAZHI | Home | Explore | My Trips | Help | Language | Theme | Profile

## Mobile

Home | Explore | My Trips | Profile

Profile menu:

My Profile  
Travel Preferences  
Accessible Travel Mode  
Notifications  
Language  
Theme  
Help and Support  
Privacy and Safety  
Sign Out

Do not place booking steps in global navigation.

Use a booking progress indicator:

1. Search
2. Select Seats
3. Passenger Details
4. Review
5. Confirmation

## 8. Feature Requirements

### Accessible Travel Mode

Available on:

- Home page
- Travel Preferences

When enabled:

- Prioritize accessible buses and boarding points.
- Highlight accessible seats.
- Support larger text.
- Respect reduced motion.
- Show assistance-friendly journey information.

Do not ask for medical information.

## Privacy-Safe Comfort Map

Available inside Seat Selection.

Show only area-level information:

- Accessible seats
- Near boarding entrance
- Window seats
- Aisle seats
- Quieter areas
- Recommended areas
- Women passengers nearby

Never show passenger identities.

## 9. Three-Phase Delivery Plan

### Phase 1 — Foundation, Navigation, Home, and Explore

Build:

/

/explore

Deliver:

- SvelteKit foundation

- Tailwind 4 setup
- Design tokens using approved palette
- Light, Dark, and System themes
- English and Tamil Paraglide setup
- Self-hosted font setup
- Shared primitives:
  - Button
  - Card
  - Input
  - Toggle
  - Badge
  - Spinner
  - Skeleton
  - EmptyState
  - ErrorState
  - ToastHost
- Desktop top navigation
- Mobile bottom navigation
- Footer
- Theme selector
- Language selector
- Profile menu
- Home page
- Journey Search
- Accessible Travel Mode switch
- Transit Explorer
- MapLibre map abstraction
- Bus results cards
- Search filters
- Canonical bus result

Verify:

```
npm run check
```

```
npm run build
```

Do not begin Phase 2 until approved.

## Phase 2 — Seat Selection and Passenger Details

Build:

`/book/[busId]/seats`

`/book/[busId]/passengers`

Deliver:

- Booking draft store
- Centralized fare calculation
- 2+2 seat grid
- Available, unavailable, selected, recommended, and accessible states
- Diagonal hatch for unavailable seats
- Comfort preferences
- Privacy-Safe Comfort Map
- Dynamic recommendation logic
- Ticket summary
- Passenger Details forms
- One passenger form per selected seat
- Validation:
  - required full name
  - age from 1 to 120
  - required gender
  - valid passenger-seat association
- Concession options
- Accessibility-assistance options
- Error summary
- First-invalid-field focus
- Memory-only passenger data

Verify:

`npm run check`

`npm run build`

Test:

pax=1  
pax=2  
pax=4  
Light / Dark / System  
English / Tamil  
Desktop / mobile  
Keyboard navigation  
PII never enters URL, storage, cookies, console, or fixtures

Do not begin Phase 3 until approved.

## **Phase 3 — Review, Confirmation, Tickets, Trips, Tracking, Refunds, and Preferences**

Build:

/book/[busId]/review  
/book/[busId]/payment  
/booking/[pnr]  
/ticket/[pnr]  
/trips  
/trips/[pnr]/track  
/refund/[refundId]  
/account/preferences

Deliver:

- Review Booking page
- Payment UI only, with mock payment completion
- Booking Confirmation
- Digital Ticket
- My Trips
- Live Tracking
- Refund and Cancellation
- Travel Preferences
- Notifications and boarding reminders
- Mobile and desktop variants
- Dark-theme variants

Payment must remain frontend-only. Do not integrate a real payment gateway.

Verify:

```
npm run check
```

```
npm run build
```

## 10. Screen-Specific Requirements

### Home

Include:

- Journey search
- From
- To
- Date
- Passenger count
- Accessible Travel Mode
- Find Buses CTA
- Privacy and accessibility trust statement

### Transit Explorer

Include:

- Route map
- Stops
- Available buses
- Time, price, AC, seat, and accessibility filters
- Canonical SETC Ultra Deluxe card
- Select Seats CTA

## Seat Selection

Include:

- Correct 2+2 layout
- Comfort Preferences
- Privacy-Safe Comfort Map
- Seat legend
- Ticket summary
- Fare calculation
- Continue to Passenger Details CTA

## Passenger Details

One card per selected seat:

Passenger 1 – Seat 5C

Passenger 2 – Seat 6C

Fields only:

Full name

Age

Gender

Concession

Accessibility requirement

## Review

Include:

- Journey details
- Bus details
- Boarding Platform 04
- Selected seats
- Fare breakdown
- Assistance request summary
- Edit actions

- Proceed to Payment CTA

## Payment

Include:

UPI

Debit / Credit Card

Net Banking

Use ₹410 for one passenger.

## Confirmation and Ticket

Include:

- PNR
- QR code area
- Route
- Bus
- Vehicle number
- Platform
- Departure/arrival times
- Seat
- Save ticket
- Add to calendar
- View My Trips
- Share Journey Status

## Tracking

Include:

- Map
- Current location
- ETA
- On-time/delay status

- Journey progress
- Share Status

## Refund

Use:

Total paid: ₹410

Cancellation fee: ₹82

Estimated refund: ₹328

Include a refund-progress timeline.

# 11. Stitch Export Corrections Still Required

The supplied ZIP is visually useful but has remaining issues. Correct these during implementation:

- Live Tracking must use SETC Ultra Deluxe and TN 01 AN 1234.
- Refund must not show Express Line 42 or old 2023 journey data.
- Passenger Details must support multiple passengers, not a single static form.
- Use one consistent selected-seat example across seat selection, review, confirmation, and ticket.
- Implement the exact approved color tokens.
- Build responsive mobile layouts for every core screen.
- Build dark-mode layouts for key screens.
- Do not depend on external Google-hosted images for essential UI or maps.

# 12. Completion Requirements

For every phase:

- Use semantic HTML.
- Preserve keyboard navigation.

- Maintain visible focus indicators.
- Use accessible labels and errors.
- Keep all UI strings in Paraglide messages.
- Ensure desktop and mobile layouts are intentional, not merely shrunk.
- Run `npm run check`.
- Run `npm run build`.
- Do not proceed beyond the approved phase.

Start with Phase 1 only.
